POLLUTION/SITUATION REPORT
Davidson Depot - Removal Polrep
Initial Removal Polrep

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
Region IV

Subject: POLREP #1
Initital
Davidson Depot
B49L
Davidson, NC
Latitude: 35.5011932 Longitude: -80.8523010

To: James Webster, USEPA R4 ERRPB
Jim Bateson, DENR
Steve Lewis, NCDENR

From: Kenneth Rhame, OSC

Date: 11/20/2016

Reporting Period: 11/1/2016 to 11/19/2016

1. Introduction

1.1 Background

Site Number:	B49L	Contract Number:	
D.O. Number:		Action Memo Date:	
Response Authority:	CERCLA	Response Type:	Time-Critical
Response Lead:	EPA	Incident Category:	Removal Action
NPL Status:	Non NPL	Operable Unit:	
Mobilization Date:	11/1/2016	Start Date:	11/1/2016
Demob Date:		Completion Date:	
CERCLIS ID:	NCN000405052	RCRIS ID:	
ERNS No.:		State Notification:	
FPN#:		Reimbursable Account #:	

1.1.1 Incident Category

CERCLA - Emergency Response / Time Critical Removal

1.1.2 Site Description

The Davidson Depot Site is located in a mixed-use residential and commercial area surrounding but not including 217 Depot Street, a former asbestos manufacturing facility, Carolina Asbestos. Carolina Asbestos Company operated on the property from the 1930s until the 1960s. As was common at the time, low-lying areas surrounding industrial facilities were used for waste disposal. It is believed that the surrounding residential areas were used by the former asbestos manufacturing facility to dispose of asbestos containing waste and some waste may have been used by residents to supplement gravel driveways or build up low-lying areas on their properties.

Early November 2016, at the request of North Carolina Department of Environmental Quality (NC DEQ), EPA began soil testing at residential properties at the Davidson Depot Site for possible asbestos. EPA is offering soil testing at no cost to residents on portions of Eden, Sloan, Depot, Watson and other streets nearest the Site.

While preparing to conduct residential soil sampling, EPA identified suspected asbestos-containing material along Eden and Sloan Streets. The release was the result of a varmint digging and erosion along the embankment/slope of a waste disposal area on the property of a former asbestos manufacturing facility, Carolina Asbestos. The asbestos manufacturing facility made asbestos fabric and tile and is believed to have operated from the 1930s to 1960s. Subsequent testing confirmed the material contained 70% asbestos. EPA oversaw the removal of this material from the streets. The North Carolina Department of Environmental Quality will coordinate the stabilization of the property of the former asbestos manufacturing facility. There is a perspective developer for the property of the former asbestos facility; the perspective developer is currently working with the North Carolina Department of Environmental Quality Brownfields program.

EPA is collecting and validating data to determine the extent of the problem. The results will determine what additional response actions are necessary to protect human health and the environment.

1.1.2.1 Location

The Site is an undetermined size area surrounding a former asbestos manufacturing facility that was located at 217 Depot Street, but excluding 217 Depot Street, Davidson, Mecklenburg County, North Carolina (the Site). Davidson is a college town with a population of approximately 11,000 and is located about 20 miles north of Charlotte in northern Mecklenburg County. The approximate geographical location of the Site is 35°29'28"N latitude and 80°49'58"W longitude.

1.1.2.2 Description of Threat

Asbestos could be harmful to residents if they are exposed through inhalation of airborne dust.

1.1.3 Preliminary Removal Assessment/Removal Site Inspection Results

U.S. EPA Region 4 Emergency Response, Removal & Prevention Branch (ERRPB) received a Removal Site Evaluation (RSE) request on September 22, 2016 from North Carolina Department of Environmental Quality (NC DEQ).

On November 1, 2016 while conducting a walk-trough of the neighborhood, EPA's On-Scene coordinator confirmed asbestos-containing material (ACM) on Eden Street, stretching for about seventy feet and on Sloan Street stretching for about seventy feet. EPA notified the Davidson Fire Department, called the National Response Center (NRC # 1163077) and sampled the material. The fire department marked off the area using traffic cones. Sample results confirmed the material was ACM (70% asbestos). The release of ACM was the result of a varmint digging into the embankment and a localized area where erosion had occurred on the property of the former Carolina Asbestos facility. On November 2, 2016, EPA oversaw the removal of the material and completed the cleanup that day. NC DEQ agreed to oversee the stabilization of the slope, erosion and varmint damage.

To date, EPA has collected 146 surface soil samples at depths of 0 to 3 inches and 3 to 6 inches. Thirty-one samples have had trace asbestos fibers detected; thirteen samples had results of 0.25% to 1% asbestos and three samples have had greater than 1% asbestos found in surface soils. The EPA observed visual asbestos containing material (ACM) on 11 properties.

2. Current Activities

2.1 Operations Section

2.1.1 Narrative

U.S. EPA Region 4 Emergency Response, Removal & Prevention Branch (ERRPB) received a Removal Site Evaluation (RSE) request on September 22, 2016 from North Carolina Department of Environmental Quality (NC DEQ).

On November 1, 2016 while conducting a walk-trough of the neighborhood, EPA's On-Scene coordinator confirmed asbestos-containing material (ACM) on Eden Street, stretching for about seventy feet and on Sloan Street stretching for about seventy feet. EPA notified the Davidson Fire Department, called the National Response Center (NRC # 1163077) and sampled the material. The fire department marked off the area using traffic cones. Sample results confirmed the material was ACM (70% asbestos). The release of ACM was the result of a varmint digging into the embankment and a localized area where erosion had occurred on the property of the former Carolina Asbestos facility. On November 2, 2016, EPA oversaw the removal of the material and completed the cleanup that day. NC DEQ agreed to oversee the stabilization of the slope, erosion and varmint damage.

To date, EPA has collected 146 surface soil samples at depths of 0 to 3 inches and 3 to 6 inches. Thirty-one samples have had trace asbestos fibers detected; thirteen samples had results of 0.25% to 1% asbestos and three samples have had greater than 1% asbestos found in surface soils. The EPA observed visual asbestos containing material (ACM) on 11 properties.

2.1.2 Response Actions to Date

On November 17, 2016 U.S. EPA Region 4 ERRPB initiated an emergency response action to conduct dust control in the neighborhood. Dust control operations are occurring periodically on a "as needed basis".

2.1.3 Enforcement Activities, Identity of Potentially Responsible Parties (PRPs)

Enforcement Activities including identification of potentially responsible parties is ongoing.

2.1.4 Progress Metrics

<i>Waste Stream</i>	<i>Medium</i>	<i>Quantity</i>	<i>Manifest #</i>	<i>Treatment</i>	<i>Disposal</i>

2.2 Planning Section

2.2.1 Anticipated Activities

Continue with dust control operations.

Continue with property assessment/sampling to determine extent.

Propose Time Critical Removal Action on properties with asbestos contamination in surface soils that pose a health risk to the residents and the public.

2.2.1.1 Planned Response Activities

Continue dust control and sampling as needed.

2.2.1.2 Next Steps

2.2.2 Issues

Time-Critical Removal must be coordinated in conjunction with stabilization efforts that occur at the former asbestos manufacturing facility.

2.3 Logistics Section

No information available at this time.

2.4 Finance Section

Estimated Costs *

	Budgeted	Total To Date	Remaining	% Remaining
Extramural Costs				
ERRS - Cleanup Contractor	\$200,000.00	\$0.00	\$200,000.00	100.00%
Intramural Costs				

Total Site Costs	\$200,000.00	\$0.00	\$200,000.00	100.00%

* The above accounting of expenditures is an estimate based on figures known to the OSC at the time this report was written. The OSC does not necessarily receive specific figures on final payments made to any contractor(s). Other financial data which the OSC must rely upon may not be entirely up-to-date. The cost accounting provided in this report does not necessarily represent an exact monetary figure which the government may include in any claim for cost recovery.

2.5 Other Command Staff

No information available at this time.

3. Participating Entities

No information available at this time.

4. Personnel On Site

No information available at this time.

5. Definition of Terms

No information available at this time.

6. Additional sources of information

No information available at this time.

7. Situational Reference Materials
